## **Information Regarding RoHS European Directive**

**Date:** May 6, 2014  
**To:** Our Valued Customers  
**Subject:** **European Directive 2011/65/EU**

Precision Tube modifies the shapes and physical properties of various alloys, but does not change their chemical composition. Precision Tube is compliant with the European Directive 2011/65/EU, more commonly known as RoHS (Restrictions on Hazardous Substances) and also known as the WEEE Standard. Some alloys may contain restricted substances, but are below the specified levels or are exempted by the standard.

### Standard results are as follows:

**Brass alloys** may contain Lead and Hexavalent Chromium below those levels specified or are exempted by the standard.

**Copper alloys** may contain Lead below those levels specified or are exempted by the standard.

**Aluminum alloys** may contain Lead below those levels specified or are exempted by the standard.

Detailed analysis of individual alloys or components is available at a charge to cover laboratory testing for those customers that require such. Contact the sales department for the charges related to your specific items.
